You will create a graphical Windows application with C# that can display and modify ...

Introduction

Tools we'll need

Creating a new database

Saving the data

How to fill in a table
Select star from albums
How to delete backticks
Intro to the series
How to delete the backticks
Building the database app
Start of the demo
Creating an album class
Adding two albums to the list
Connecting the database to the database
Where does the data source live?
Setting up the database
Running the app
How to create searches
Programming the new search button
The problem with parameter queries
Adding a picture to the screen
How to test the problem
Adding new records to the database
Adding an integer to the database
Adjusting the column titles
Execute non-query query
Creating a foreign key
Install mysql workbench
Connecting to the database
Configuring the tracks table
We have a problem with Mamp synchronization
Inserting data into the tracks table
Selecting items from the database
Changes to the definition of tracks
Fixing the problem with the binding source
Foreign keys and joins
Selecting from the table
Changing the query using a join
Uml diagrams for our current application
Associative vs aggregation
Introduction to compound queries
Fetching the list of all tracks
Using the delete statement to delete tracks
The problem with converting an integer to an integer
Deleting a track by deleting its Id
